

What is FOG?

FOG stands for
fats, oils, and grease

Grease waste is created during the food prep process, and can come in the form of **yellow** or **brown** grease

Yellow grease: used
cooking oil

Brown grease: the FOG
that builds up in
wastewater systems, is
difficult to collect

The problem with FOG

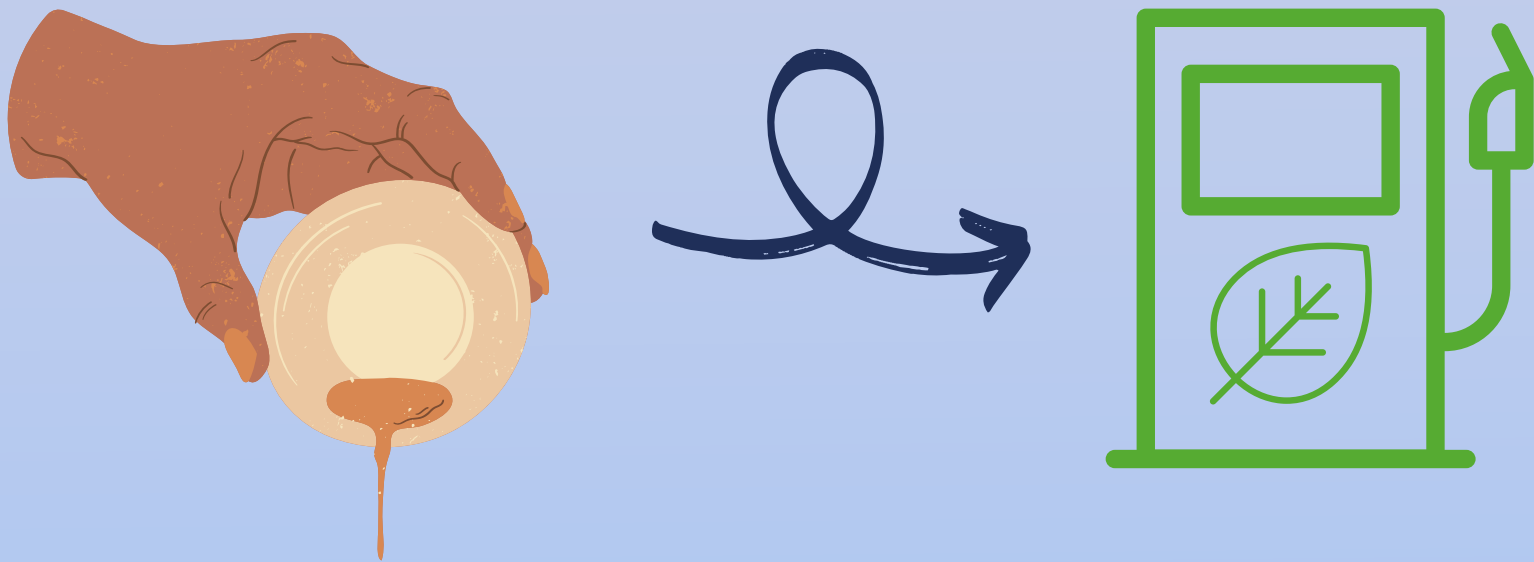

Billions of gallons of FOG are released into sewer systems annually

This leads to **pipe blockages** and **sanitary sewer overflows**

These overflows are **costly** to deal with, and cause **environmental harm**

See our next post to learn
how **FOG** becomes **fuel!**
